796. Rotate String

Easy 1532 78 Add to List Share

Given two strings `s` and `goal`, return `true` *if and only if* `s` *can become* `goal` *after some number of* ***shifts*** *on* `s`.

A **shift** on `s` consists of moving the leftmost character of `s` to the rightmost position.

- For example, if `s = "abcde"`, then it will be `"bcdea"` after one shift.

Example 1:

```
Input: s = "abcde", goal = "cdeab"
Output: true
```

Example 2:

```
Input: s = "abcde", goal = "abced"
Output: false
```

Constraints:

- `1 <= s.length, goal.length <= 100`
- `s` and `goal` consist of lowercase English letters.
