11   Hey everyone, I had my phone screen for Facebook (E3 Level). 2 Questions, 45 min, First 5 for intro, n

▼   questions by me?

Questions were pretty simple.

1. https://leetcode.com/problems/merge-sorted-array/
2. Print any path from top-left corner to bottom-right matrix, matrix cell contains 2 values, 0 and 1. 0
   Couldn't find exact question on Leetcode.

Moving to onsite.

Tips:

1. Prepare WHY are you following a particular approach, like BFS/DFS in 2nd question.
2. Time complexity must be known for the algo you are writing. Can ask how did you calculate time
3. How are you making the answer in 2nd question, while backtracking or while moving forward? Ar

similar today's question of the day

https://leetcode.com/problems/unique-paths-iii/

I would think if question asks for ANY path, use DFS and terminate when you reach the bottom right corne
If question asks for ALL paths, can use DFS/BFS with backtracking
